

High Purity Metal Silicon Powder

This product is high purity metal silicon fine powder produced in our manufacturing process, as we stably procure its raw material from overseas.

We now offer an average particle size of 20 μ m product named "MSP-1A351".

Metal silicon is generally used in aluminum alloy, silicon resin, silicon steel, polycrystalline silicon, etc. Our product is actively involved in new technological development in the advanced electronics field.

■ Product properties (standard values) :

Product	MSP-1A351	
Particle size(μ m)	D-10%	39.52
	D-50%	19.16
	D-90%	4.41
Chemical component (%)	Si	99.59
	FeT	0.26
	Al	0.12
	Ca	0.03

Analytical methods Si : 100-(FeT+Al+Ca)
